

This book is a publication of Carburetion Technology Enterprises.

We began our interest in the field of gasoline vaporization three years ago with the naive attitude that this was a free enough country to manufacture any product that might help the economy.

It did not take us long to learn that if a product threatens the profits generated by a large monopoly, it's chances of reaching the market place here or in any other country are quite small.

Who exactly is responsible for the fact that although other technologies have advanced in such great strides, such as the electronics and aviation fields, the automobile engine has not significantly changed in over three generations.

Why is it that Einstien claimed that one cup of gas could heat a home for 100 years, yet fuel is still so grossly wasted?

Read this inventor's answers to these questions and learn what you can do to help.
